Agile Processes in Software Engineering and Extreme Programming - Workshops Maria Paasivaara,Philippe Kruchten,2020-09-23 This open access book constitutes the 6 research workshops the Agile Education and Training Track the Doctoral Symposium as well as a panel presented at XP 2020 the 21st International Conference on Agile Software Development which was held during June 8 12 2020 The conference was planned to take place at the IT University of Copenhagen Denmark Due to the COVID 19 pandemic the conference was held online In 2020 the following six workshops took place Third International Workshop on Software Intensive Business Eighth International Workshop on Large Scale Agile Development Second European Symposium on Serverless Computing and Applications Second International Workshop on Agile Transformation First International Workshop on Agility with Microservices Programming Third International Workshop on Autonomous Agile Teams XP is the premier agile software development conference combining research and practice It is a unique forum where agile researchers practitioners thought leaders coaches and trainers get together to present and discuss their most recent innovations research results experiences concerns challenges and trends XP conferences provide an informal environment to learn and trigger discussions and welcome both people new to agile and seasoned agile practitioners The 31 papers presented in this volume were carefully reviewed and selected from overall 79 submissions In addition to the 26 workshop papers this volume also includes 2 papers from the Agile Education and Training Track and 3 papers from the Doctoral Symposium Furthermore the book contains a summary of a panel discussion with the topic Covid 19 s Influence on the Future of Agile *Information Technology and Systems* Alvaro Rocha,Carlos Ferrás,Hiram Calvo,2025-07-26 This book comprises papers written in English and accepted for presentation and discussion at the 2025 International Conference on Information Technology Organizational Models and Information Systems Software and Systems Modeling Software Systems Architectures Applications and Tools Multimedia Systems and Applications Computer Networks Mobility and Pervasive Systems Intelligent and Decision Support Systems Big Data Analytics and Applications Human Computer Interaction Ethics Computers and Security Health Informatics Information Technologies in Education Media Applied Technology and Communication The primary audience for this book includes postgraduate students and researchers in the field of Information Systems and Technologies The secondary audience consists of undergraduate students and professionals working in related domains **Innovations in Software Engineering for Defense Systems** National Research Council,Division on Engineering and Physical Sciences,Committee on Applied and Theoretical Statistics,Division of Behavioral and Social Sciences and Education,Committee on National Statistics,Oversight Committee for the Workshop on Statistical Methods in Software Engineering for Defense Systems,2003-10-22 Recent rough estimates are that the U S Department of Defense DoD spends at least 38 billion a year on the research development testing and evaluation of new defense systems approximately 40 percent of that cost at least 16 billion is spent on software development and testing There

is widespread understanding within DoD that the effectiveness of software intensive defense systems is often hampered by low quality software as well as increased costs and late delivery of software components. Given the costs involved, even relatively incremental improvements to the software development process for defense systems could represent a large savings in funds. And given the importance of producing defense software that will carry out its intended function, relatively small improvements to the quality of defense software systems would be extremely important to identify DoD software engineers and test and evaluation officials may not be fully aware of a range of available techniques because of both the recent development of these techniques and their origination from an orientation somewhat removed from software engineering. *ie* from a statistical perspective. The panel's charge therefore was to convene a workshop to identify statistical software engineering techniques that could have applicability to DoD systems in development. Creating Value for All Through IT Birgitta Bergvall-Kåreborn, Peter Axel Nielsen, 2014-05-19. This book constitutes the refereed proceedings of the IFIP WG 8.6 International Working Conference Creating Value for All Through IT on Transfer and Diffusion of IT (TDIT 2014) held in Aalborg, Denmark, in June 2014. The 18 revised full papers presented together with 5 research in progress papers, 2 experience reports, and a panel were carefully reviewed and selected from 37 submissions. The full papers are organized in the following topical sections: creating value, creating value through software development, and creating value through applications.

Handbook of Research on Engineering Innovations and Technology Management in Organizations

Gaur, Loveleen, Solanki, Arun, Jain, Vishal, Khazanchi, Deepak, 2020-04-17. As technology weaves itself more tightly into everyday life, socio-economic development has become intricately tied to these ever-evolving innovations. Technology management is now an integral element of sound business practices, and this revolution has opened up many opportunities for global communication. However, such swift change warrants greater research that can foresee and possibly prevent future complications within and between organizations. The Handbook of Research on Engineering Innovations and Technology Management in Organizations is a collection of innovative research that explores global concerns in the applications of technology to business and the explosive growth that resulted. Highlighting a wide range of topics such as cyber security, legal practice, and artificial intelligence, this book is ideally designed for engineers, manufacturers, technology managers, technology developers, IT specialists, productivity consultants, executives, lawyers, programmers, managers, policymakers, academicians, researchers, and students.

Models for Software-Intensive System Development

Benoit Combemale, Robert France, Jean-Marc Jézéquel, Didier Vojtisek, James Richard Heron Steel, Bernhard Rumpe, 2016-02-15. This book introduces model-driven approaches in software development using a pragmatic presentation that includes foundational sidebars and industrial experiences. Suitable as a textbook for master students in software engineering, it is also an ideal reference for professional software engineers. The book leverages experiences from the modeling community to provide a broader view of the use of models in software development. It fills a gap in the literature by providing a body of knowledge

Design Thinking for Software Engineering Jennifer Hehn, Daniel Mendez, Walter Brenner, Manfred Broy, 2022-02-13 This book explores the possibility of integrating design thinking into today's technical contexts Despite the popularity of design thinking in research and practice this area is still too often treated in isolation without a clear consistent connection to the world of software development The book presents design thinking approaches and experiences that can facilitate the development of software intensive products and services It argues that design thinking and related software engineering practices including requirements engineering and user centric design UX approaches are not mutually exclusive Rather they provide complementary methods and tools for designing software intensive systems with a human centric approach Bringing together prominent experts and practitioners to share their insights approaches and experiences the book sheds new light on the specific interpretations and meanings of design thinking in various fields such as engineering management and information technology As such it provides a framework for professionals to demonstrate the potential of design thinking for software development while offering academic researchers a roadmap for further research

Discovery and Innovation Donna Fossum, 2000 This report based largely on the RaDiUS database developed by RAND allows policymakers and the public for the first time to break down the complex federal R D portfolio into its component state and local elements It details the full range of federal R D activities in terms of the individual laboratories centers universities and companies performing the research doing the studies and conducting the analyses It reveals that virtually every community in the nation has a direct stake in the federal R D enterprise

BOOK JACKET *Speed, Data, and Ecosystems* Jan Bosch, 2017-01-06 As software R D investment increases the benefits from short feedback cycles using technologies such as continuous deployment experimentation based development and multidisciplinary teams require a fundamentally different strategy and process This book will cover the three overall challenges that companies are grappling with speed data and ecosystems Speed deals with

shortening the cycle time in R D Data deals with increasing the use of and benefit from the massive amounts of data that companies collect Ecosystems address the transition of companies from being internally focused to being ecosystem oriented by analyzing what the company is uniquely good at and where it adds value Continuous Software Engineering Jan Bosch,2014-11-11 This book provides essential insights on the adoption of modern software engineering practices at large companies producing software intensive systems where hundreds or even thousands of engineers collaborate to deliver on new systems and new versions of already deployed ones It is based on the findings collected and lessons learned at the Software Center SC a unique collaboration between research and industry with Chalmers University of Technology Gothenburg University and Malm University as academic partners and Ericsson AB Volvo Volvo Car Corporation Saab Electronic Defense Systems Grundfos Axis Communications Jeppesen Boeing and Sony Mobile as industrial partners The 17 chapters present the Stairway to Heaven model which represents the typical evolution path companies move through as they develop and mature their software engineering capabilities The chapters describe theoretical frameworks conceptual models and most importantly the industrial experiences gained by the partner companies in applying novel software engineering techniques The book s structure consists of six parts Part I describes the model in detail and presents an overview of lessons learned in the collaboration between industry and academia Part II deals with the first step of the Stairway to Heaven in which R D adopts agile work practices Part III of the book combines the next two phases i e continuous integration CI and continuous delivery CD as they are closely intertwined Part IV is concerned with the highest level referred to as R D as an innovation system while Part V addresses a topic that is separate from the Stairway to Heaven and yet critically important in large organizations organizational performance metrics that capture data and visualizations of the status of software assets defects and teams Lastly Part VI presents the perspectives of two of the SC partner companies The book is intended for practitioners and professionals in the software intensive systems industry providing concrete models frameworks and case studies that show the specific challenges that the partner companies encountered their approaches to overcoming them and the results Researchers will gain valuable insights on the problems faced by large software companies and on how to effectively tackle them in the context of successful cooperation projects **The 14th Convention of Electrical & Electronics Engineers in Israel, Tel-Aviv, 26-28 March 1985** ,1985
