

BORON HYDRIDES

The background of the slide features several chemical structures. At the top, there is a diagram of a BH3 molecule with a central Boron (B) atom bonded to three Hydrogen (H) atoms. Below this, a large, complex structure is visible, which appears to be a carborane cluster, specifically a nido-pentaborane derivative. This structure consists of a five-membered boron (B) core with several carbon (C) and hydrogen (H) atoms attached, forming a cage-like structure. The overall background is a dark blue and purple gradient with a subtle pattern of chemical structures.
