Applications, Committee on Polymer Science and Engineering, 1994-01-01 Polymers are used in everything from nylon stockings to commercial aircraft to artificial heart valves and they have a key role in addressing international competitiveness and other national issues. Polymer Science and Engineering explores the universe of polymers describing their properties and wide ranging potential and presents the state of the science with a hard look at downward trends in research support. Leading experts offer findings, recommendations and research directions. Lively vignettes provide snapshots of polymers in everyday applications. The volume includes an overview of the use of polymers in such fields as medicine and biotechnology, information and communication, housing and construction, energy and transportation, national defense and environmental protection. The committee looks at the various classes of polymers: plastics, fibers, composites and other materials, as well as polymers used as membranes and coatings and how their composition and specific methods of processing result in unparalleled usefulness. The reader can also learn the science behind the technology, including efforts to model polymer synthesis after nature's methods and breakthroughs in characterizing polymer properties needed for twenty-first century applications. This informative volume will be important to chemists, engineers, materials scientists, researchers, industrialists and policymakers interested in the role of polymers as well as to science and engineering educators and students.

[Handbook of Biodegradable Polymers](#) Shakeel Ahmed, Riyaz Ali M. Osmani, 2024-08-02 This book presents a comprehensive and authoritative review of the recent developments and advances in biodegradable polymers and their biomedical applications. Following an interdisciplinary approach, it combines the medical and pharmaceutical fields in conjunction with biomedical engineering, polymer science, materials science, and pharmacological aspects of biodegradable polymers. The text covers the synthesis, properties, and characterization of biodegradable polymers and systems, and their applications in sustained drug delivery, anticancer therapy, vaccine delivery, gene delivery, surgery, wound care, cardiology, dentistry, orthopedics, medical devices, tissue engineering, and cosmeceuticals. It also details the safety aspects, market economy challenges, and opportunities related to biodegradable polymers, providing an understanding of the commercial and translational aspects of these crucial biomaterials. Edited and authored by renowned scientists working on biodegradable polymers, biocomposites, biodegradable systems, and implants, the book is an important resource for academicians, researchers, students, professionals, and general readers interested in exploring the potential biomedical applications of biodegradable polymers.

*[The Cumulative Book Index](#)*, 1999 **[Polymers in Medicine II](#)** E. Chiellini, 2012-12-06 Polymers and polymer-based composites have gained increasingly larger applications in medicine and surgery. Presently most biomaterials applications rely on industrial substances that were initially developed for non-medical purposes. Moreover, polymers have been often used regardless of their peculiar characteristics, which can be vice versa and very attractive for some specific applications. In the past years we have assisted to a significative and faster development of polymer science as well as of medicine and surgery. The assistance of computer-aided apparatus, the use of always more advanced instruments,

the larger interest of the academic and industrial world bring continuously new contributions to the research on biomedical and pharmaceutical use of polymers The need of a forum where these specific researchs can be presented and discussed and the success of the 1st Conference on Polymers in Medicine held in Porto Cervo in 1982 have encouraged the Editors to plan a periodical meeting focused on polymers and composites to be held every odd year This book contains papers selected by an International Scientific Committee among those presented at the 2nd International Conference on Polymers in Medicine Biomedical and Pharmaceutical Applications held in Capri Italy 3-7 June 1985 In addition to contributed papers several Authors were invited to present the state of the art as well as their personal contribution on specific key arguments The level of all contributions was high the participation well qualified and the meeting interesting and hopefully pleasant **Medical Polymers**, 2004 The fourth international conference focusing on polymers used in the medical industry The use of polymers in medical technology continues to grow and provides major business opportunities for companies who service the medical industry Medical Polymers 2004 brought together speakers and delegates from the whole medical device supply chain to identify and address the challenges facing our industry The conference proceedings will appeal to anyone directly involved or associated with the medical device industry They will be of particular value for businesses involved with design and manufacturing raw material supply machine and equipment supply processing and moulding The papers presented provide an excellent overview of the current state and future potential of polymers used in the medical industry **Japanese**
