McAdams noted that some students did not understand even simple math statements such as This equation is determinate. Those students who had not acquired a basic math vocabulary were left behind becoming frustrated and mentally dropping out of class. Mr. McAdams quickly added vocabulary exercises to his classroom teaching but found that there were no adequate resources for vocabulary acquisition. All of the online math dictionaries and encyclopedias were either woefully incomplete or written at a college graduate level. The author began by creating a vocabulary resource for his students using as a guide the vocabulary actually used in the textbooks the students were using. The list of words swiftly grew and the task of preparing these resources quickly grew beyond what a full time teacher could accomplish with all the other activities important to teaching. Mr. McAdams was amazed at the enormous size of the math vocabulary that students must gain to be fluent in math. He took the development of this important resource seriously and after devoting nine years to its development has created All Math Words Dictionary. The list of words and phrases to be defined was collected from various textbooks in use in the United States and United Kingdom. Each of these words was carefully researched to find all of the ways the word was used in math classes for pre algebra beginning algebra geometry and intermediate algebra. The definitions were carefully crafted and critically explored to meet the goals of concise complete correct and comprehensible. Usefulness of these definitions for non native English speakers was considered and pronunciation was developed using the IPA. Knowing that a picture sometimes is worth a thousand words Mr. McAdams added abundant illustrations to assist students in placing words in a visual context. The result of this extensive effort is All Math Words Dictionary an important tool for math teachers.
