[Show Header](#)

Language/Type:  Java [file processing Scanner](#)

Author: Jared Jones (on 2013/04/01)

Modify the preceding wordWrap method into a new wordWrap3 method that wraps only whole words, never chopping a word in half. Assume that a word is any whitespace-separated token and that all words are under 60 characters in length. Make sure that each time you wrap a line, the subsequent wrapped line(s) each begin with a word and not with any leading whitespace. Accept only a single parameter for the input Scanner, and send your method's output to the console, as in the original wordWrap problem; do not use an output file as was done in wordWrap2.

Data Interpretation for the CAT and Other MBA Examinations, Life of Josephus Flavius Josephus, 2003. Flavius Josephus is without a doubt the most important witness to ancient Judaism from the close of the biblical period to the aftermath of the destruction of the temple in A.D. 70. His four surviving works, *Judean War*, *Judean Antiquities*, *Life*, and *Against Apion*, provide the narrative structure for interpreting the other more fragmentary written sources and physical remains from this period. This is the first comprehensive literary historical commentary on the works of Flavius Josephus in English. Steve Mason, York University, Toronto, edits the scheduled 10 volumes.
