As a result experts in the area have increased the number of available sensors and methodologies. However the quick evolution of geospatial technologies makes it necessary to revise their use, integration and application in CH. This process is difficult to adopt due to the new options which are opened for the study, analysis, management and valorization of CH. Therefore the aim of the present Special Issue is to cover the latest relevant topics, trends and best practices in geospatial technologies and processing methodologies for CH sites and scenarios as well as to introduce the new tendencies. This book originates from the Special Issue Data Acquisition and Processing in Cultural Heritage focusing primarily on data and sensor integration for CH documentation, restoration in CH, heritage 3D documentation and modeling of complex CH sites, drone inspections in CH, software development in CH and augmented reality in CH. It is hoped that this book will provide the advice and guidance required for any CH professional making the best possible use of these sensors and methods in CH.

Senèze: Life in Central France Around Two Million Years Ago

Eric Delson, Martine Faure, Claude Guérin, 2025-04-09

The paleontological site of Sen ze Haute Loire central France was discovered in 1892 inside a volcanic crater. For over 40 years local peasant Pierre Philis collected fossils and sold them to French and Swiss museums. The site became world famous for its well preserved skeletons of ungulates and carnivores as well as rare but well preserved remains of primates and other mammals. It is considered the reference fauna for the late Villafranchian and MNQ 18 biochronological units of European mammalian evolution but the lack of provenance data made modern research difficult. From 2000 2006 the multidisciplinary Franco American Sen ze Research Project undertook five seasons of major fieldwork with the goals of clarifying the age, stratigraphy and taphonomy of Sen ze as well as finding additional remains especially of the less well known taxa. In this volume following a history of study and summary of the new fieldwork four geological chapters consider field methods, stratigraphy, volcanology and dating. Combining argon argon ages and paleomagnetic calibration the newly recovered fossils are shown to date between 2.20 and 2.08 Ma with concentrations ca 2.20 2.18 and 2.10 2.08 Ma significantly older than previously thought. Chapters on palynology, ichthyology and ornithology are followed by eight chapters on the fossil mammals. The chapter on biochronology places Sen ze among other sites at the start of MNQ 18 which is estimated to end ca 1.7 Ma. Of some 2200 specimens known from the site over half are cervids with bovids, rhinocerotids and equids far behind. According to data from palynology and the habitat preferences of the more common mammals the paleoenvironment around the Sen ze maar would have included forest, woodland and grassland perhaps in a warmer and moister climate than today. Taphonomic studies revealed that bones often rested a long time under water lacked any indication of carnivore attack and often displayed pathologies in their joints. It is likely that most of the associated skeletons were preserved undisturbed after large mammals fell into the paleolake and drowned without being able to climb out. This book responds to the long held desire of later Cenozoic paleontologists to see a modern study of a site recognized worldwide as a biochronologic reference for the Plio

Pleistocene Our study required renewed fieldwork using up to date techniques of topography sedimentology stratigraphy geochronology and taphonomy The systematic paleontology chapters are based on re study of the entire body of Sen ze fossils collected during more than a century of research The volume will be of interest to paleontologists especially those concerned with the evolution of the European fauna and with the taxa studied as well as with paleoenvironmental reconstruction and biogeography It will also be of value to mammalogists interested in analyses of near modern taxa and to paleoanthropologists archaeologists and taphonomists interested in the methods utilized and the role of Sen ze as a comparative standard for a site of this age without human intervention It will surely be an essential reference for all those who want to know more about Life in Central France Around Two Million Years Ago
