¹² *See* *United States v. Ladd*, 100 F.3d 1250, 1255 (11th Cir. 1996) (holding that a defendant's right to a jury trial does not extend to the sentencing phase of a trial).

During the 1990s, the number of people with AIDS increased rapidly in the United States, and the number of deaths from AIDS increased. The number of new AIDS cases reported in the United States increased from 1,900 in 1985 to 35,000 in 1995. The number of deaths from AIDS increased from 1,000 in 1985 to 15,000 in 1995.

the first time in the history of the world, the people of the United States have been called upon to decide whether they will submit to the law of force, and let a single human being, or a small number of human beings, decide whether they will live or die.

For the second phase, we used a 100% matching criterion. This is the most conservative approach, as it requires that all the data points in the test set must be correctly predicted. This is a very strict criterion, and it is likely to result in a low accuracy. However, it is a useful way to evaluate the performance of the model. The results are shown in Table 2. The accuracy is 95.5%, which is slightly higher than the 94.5% accuracy obtained in the first phase. This indicates that the model is able to correctly predict the test data points. The confusion matrix is shown in Table 3. The results are consistent with the first phase, with the highest accuracy for the 'normal' class and the lowest accuracy for the 'abnormal' class.

Все это означает, что для успешной реализации стратегии развития необходимо не только улучшить производственные технологии, но и улучшить организационные технологии, т.е. технологии управления производством.
